                     The present sequence encodes the Chlamydia pneumoniae 98 kDa outer membrane protein, known as CPMI00640. Chlamydia pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and sinusitis. It also has an association with atherosclerosis and asthmathe 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Key

                                                                                                                                                                                                       transcriptional termination region; (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a Pl comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other proteins; (6) a purified polypeptide composition comprising at least 50 weight % of Pl; and (7) a monoclonal antibody binding specifically to the
                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel nucleic acid (N1) encoding a Chlamydia pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to N1; (3) an expression cassette comprising N1 under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ||

                                                                         This sequence encodes a Chlamydia antigen of the invention, designated CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosting Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The infections. Chlamydia is a pathogen implicated in the development of the for example. Comparis a pathogen implicated in the development of the foreventing the accuracy accuracy is a pathogen implicated in the development.
                             (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding preventing, diagnosing pneumonia, bronchitis,
                                                                                                                                                                                                                                                                                                                            Claim 2; Fig 1; 174pp; English.

By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAW86816-27) encoding Comp4-Omp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12.11.10.5,4,13 and 14 in one cluster and Omp6.7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding these proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3200 BP; 946 A; 708 C; 623 G; 923 T; 0 other;

                    The present sequence encodes the Chlamydia pneumoniae 98 kDa outer membrane protein, known as CPM100640. Chlamydia pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and sinusitis. It also has an association with atherosclerosis and asthmathe 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to perfection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.
                                                                                                                                                                                                                                                                                                                      01-DEC-1998;

Nucleic acids encoding preventing, diagnosing pneumonia, bronchitis, polypeptide antigens from Chlamydia useful for and treating diseases such as community acquired sinusitis and asthmatic bronchitis, adult-onset

Claim 2 Page 140-141; 174pp; English

C: This sequence encodes a Chlamydia antigen of the invention, designated CC CPN100634. The nucleic acids (and their complementary sequences) may be CC used as diagnostic agents for detecting the presence of nucleic acids CC encoding Chlamydia antigens in samples according to standard methods. CC and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction CC (PCR) assays. Antisense sequences may be used to down regulate CC expression of the proteins and may be used to treat infections. The CC uncleic acids may also be used to produce the protein antigens they CC encode according to standard recombinant DNA methodologies. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC (infections. Chlamydia is a pathogen implicated in the development of CC (for example) community acquired pneumonia, upper respiratory tract CC disease (especially bronchitis and sinusitis, asthmatic bronchitis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of NI; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to NI; (3) an expression cassette comprising NI under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional in an expression host, and a transcriptional initiation region functional initiation region func
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel nucleic acid (N1) encoding a Chlamydia pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-NOV-1998;

the other, and encode polypeptides of about 89.5-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for 0mp4-0mp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) eroding Omp4-Omp15 proteins (see AAX08417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see AAW88418) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. Phamoniae outer membrane complex, a polyclonal antibody (PAB 150)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding these proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-105610/09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a Chlamydia antigen of the invention, designated CC CPN100639. The nucleic acids (and their complementary sequences) may be CC used as diagnostic agents for detecting the presence of nucleic acids cencoding Chlamydia antigens in samples according to standard methods, CC and therefore, for diagnosing Chlamydia infections. For example, they may CC be used as primers and probes for diagnostic polymerase chain reaction CC (PCR) assays. Antisense sequences may be used to down regulate CC expression of the proteins and may be used to treat infections. The CC encode according to standard recombinant DNA methodologies. The CC encode according to standard recombinant DNA methodologies. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC infections. Chlamydia is a pathogen implicated in the development of CC (for example) community acquired pneumonia, upper respiratory tract CC disease (especially bronchitis and sinusitis, asthmatic bronchitis, adults.

           score greater than or equal to the score of the result bein and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,
